

ECT* Doctoral training program on "Heavy Ion Collisions"

A school on heavy-ion physics for PhD students -with emphasis on theory- will take place in Trento, Italy, from April 7 to May 16th, 2014 (6 weeks), just before Quark Matter 2014. Lectures are in the morning only (1+1 hour), so that students can work on their own research during the afternoon. This unique format allows for extensive interactions with speakers and among participants. Past editions have proven quite successful.

More details can be found here, as well as instructions on how to apply:

<http://www.ectstar.eu/activities/schools>

<http://www.ectstar.eu/node/128>

The deadline for applications is January 31st, 2014.

The ECT* can provide fellowships to selected students to cover their living expenses (i.e. accommodation and a limited per diem). Priority will be given to students staying for the entire length of the Training Programme. It is understood that students attending only parts of the program will fully self support their living expenses.

Speakers/topics:

Derek Teaney	: Hydrodynamics
Gregory Soyez, Guilherme Milhano	: Jets
Marco van Leeuwen	: Experimental techniques
Mikko Laine	: Finite-temperature QCD
Francois Gelis, Dionysis Triantafyllopoulos	: Color-Glass Condensate
Peter Arnold	: Strong coupling techniques

Please forward this information to your PhD students.

The organizers,
Francois Gelis and Jean-Yves Ollitrault
