

SRIMfit Installation Guide

(for WinOS)

※ for MacOS, see the last page of this manual

Update Log :

2018.10/21 ver 3.01.03E English edition

SRIMfit Installation Guide

Contents

- (1) Setup for Excel
- (2) Installation procedure
 - (3a) Install using automatic script
 - (3b) Install by manual procedures
- (4) Confirm SRIMfit is working ?
- (5) Uninstallation procedure
- (6) Link Error measures
 - Install for Old Excel
 - Install for MacOS

(Note for Install operations)

- Some Excel files of SRIMfit include macro description inside.
- When you open those files, the following message will appear;

Then, click “Enable Content” and continue.;

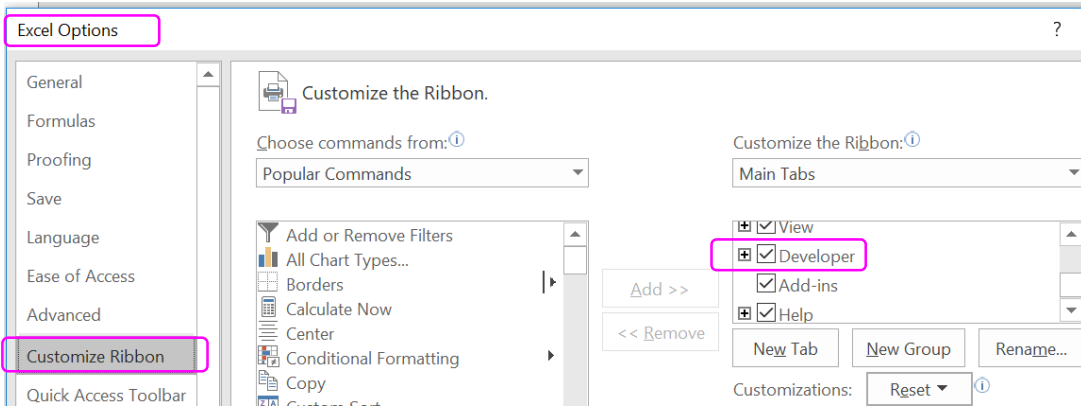

Setup for Excel

(1) Setup for your Excel

The following screen shots are examples using Excel2016 on Win10.

(1-1) Show [Developer] Tab

Run your Excel. From the menu of [File:Option:Customize Ribbon], make check at Main Tabs [Developer].

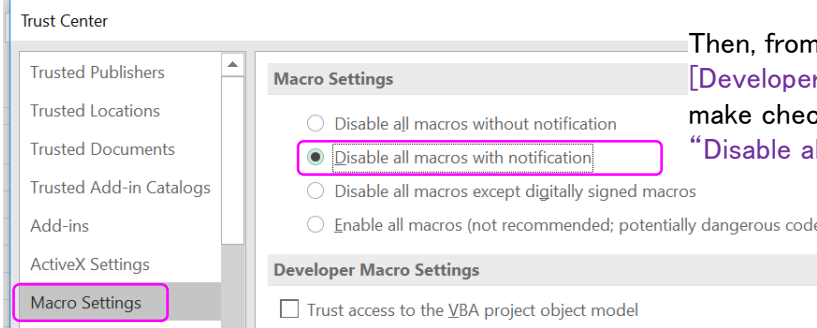

(1-2) Give permission for Macro Security

Check the [Developer] tab is shown.

Then, from the menu of [Developer: Macro Security: Macro Settings], make check mark at "Disable all macros with notification".

From the security point of view, this setting is safe for your PC.

But when you open a macro included excel book, the following message will appear;

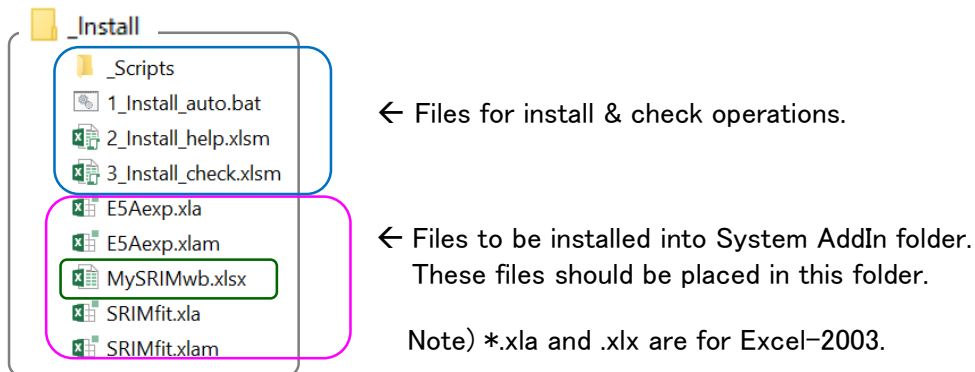

Then, click "Enable Content" and continue.;

Installation procedure

(2) Setup “_Install” folder

(2-1) Explanation for the files in “_Install” folder

Open and see “_Install” folder which you have downloaded from SRIMfit HP.

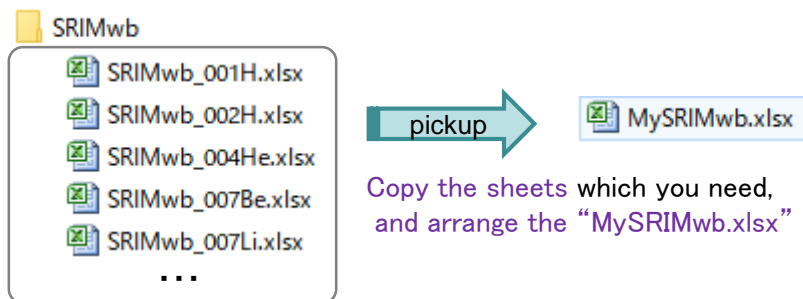

Here, the **MySRIMwb.xlsx** should be prepared by your own purpose. The default file included is for users in RIKEN.

(2-2) Preparation for “MySRIMwb.xlsx” (SRIM-2013 data sheets)

[if you need it]

Open and see “SRIMwb” folder.

Or, you can build your own sheets using SRIM-2013 code. For the detail, please see “Users Manual: How to prepare MySRIMwb”.

(3a) Install using automatic script

- Usually, the following script works well. But if you failed, please go to section (3b).
- As the script overwrites files in the System AddIn folder, it is recommended to save previous files in the folder in advance, if you need it.

(3a-1) Run a batch file

Right click “1_Install_auto.bat”, and chose 「Run as administrator」

※ As this installation needs to copy files into MS-Office System AddIn folder, the system admin privilege is needed.

DOS window will appear, then please chose a menu number.

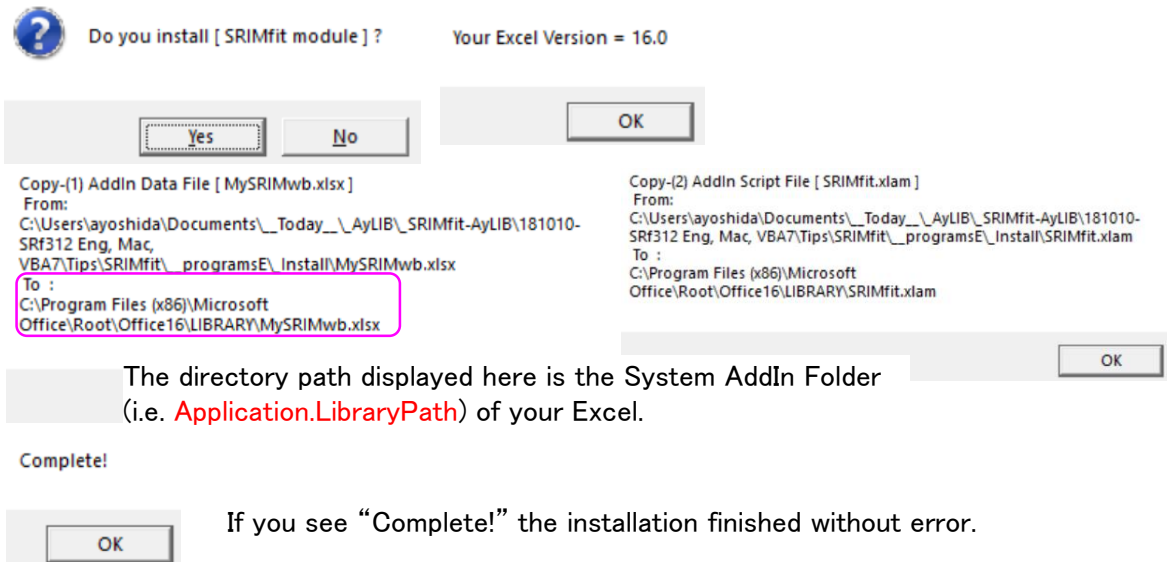

```

C:\WINDOWS\System32\cmd.exe
Please chose a menu which you will install.
1. SRIMfit + MySRIMwb
2. a macro for E5Aexp

[ for Excel-2003 ]
3. SRIMfit + MySRIMwb
4. a macro for E5Aexp
[1, 2, 3, 4]?
    
```

← #1. SRIMfit + MySRIMwb (necessary)
 #2. a macro for E5Aexp (if you need it)
 #3 and 4 are for Excel-2003.

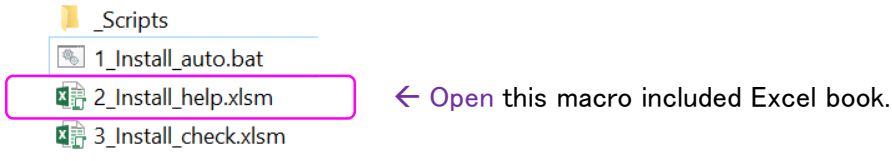

A VBScript in _Scripts folder selected by the menu will run, and the following message boxes will appear. Click “OK” for all and go ahead.

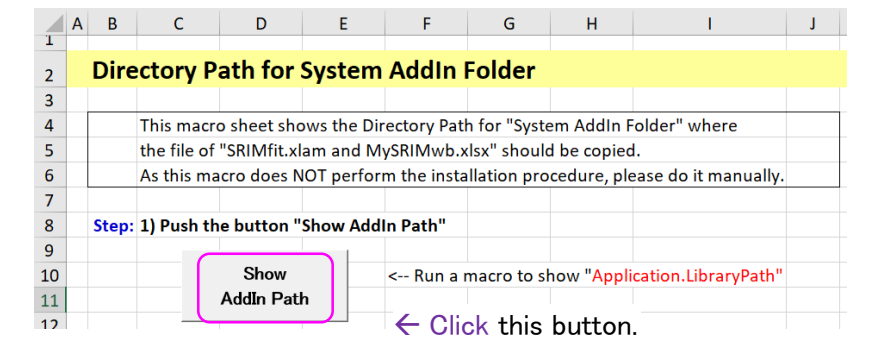

(3b) Install by manual procedures

The following manual installation is necessary when you failed in automatic installation, or you only replace a new “MySRIMwb.xlsx” file.

(3b-1) Check a directory path to install

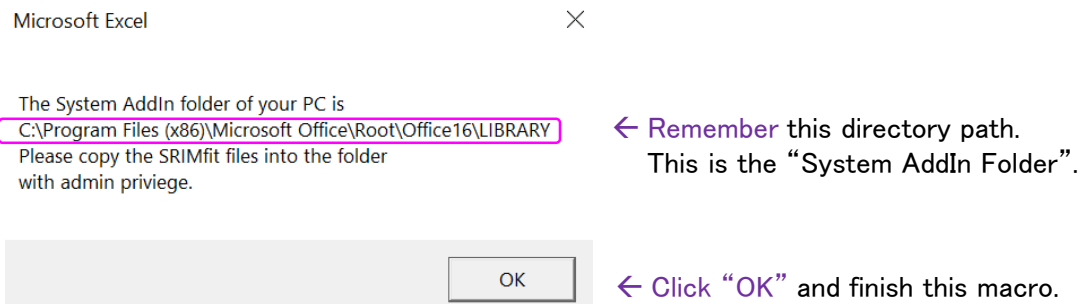

← Open this macro included Excel book.

← Click this button.

Then a message box appear and show you a directory path to install.

← Remember this directory path. This is the “System AddIn Folder”.

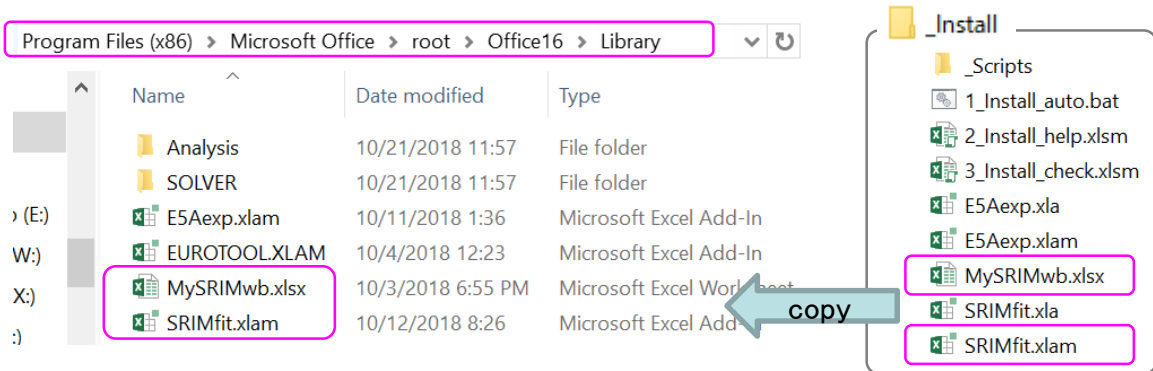

← Click “OK” and finish this macro.

The path displayed here may be VERY different from this example. It depends on ;

- The version of your MS-Excel,
- If you did update install for your old Excel,
- If you installed multi versions of Excel in one PC.

(3b-2) Copy SRIMfit files into the folder

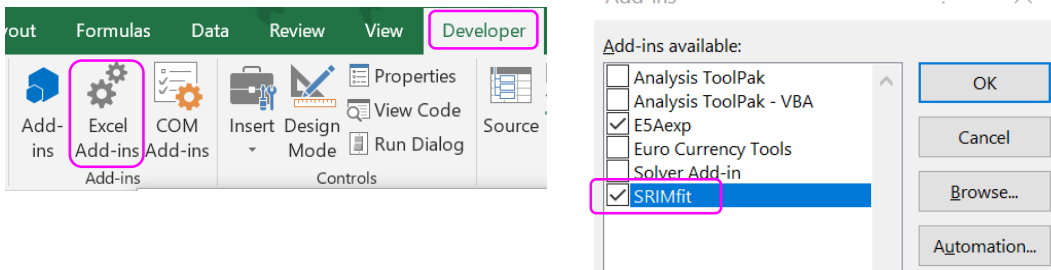

Open and see the “System AddIn” folder.

Copy files of “SRIMfit.xlam and MySRIMwb.xlsx” into the “System AddIn” folder with administrator privilege”. If you need, copy “E5Aexp.xlam”, also.

(3b-3) Registration for AddIn

Run Excel and open a New blank workbook.
Click [Developer: Excel Add-ins]

Make check mark for “SRIMfit”, and “E5Aexp” if you need it.

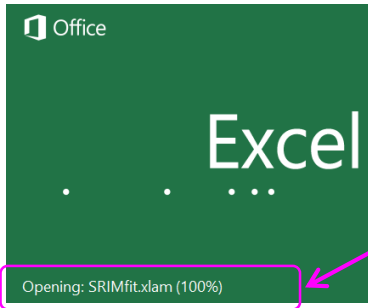

Here, if a message box telling “Link error” appears, please refer to (5-3).

Thus, the manual installation has finished.

Confirm SRIMfit is working ?

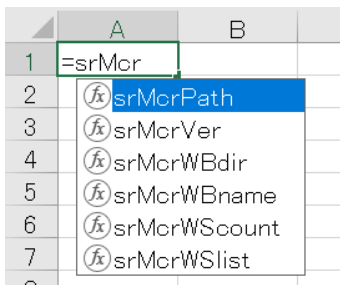

● check the macro working ?

(4-1) When Excel is starting up

Run Excel, and during its start-up, the installed AddIn file of "SRIMfit.xlam" will be opened automatically

(4-2) First, open a New blank workbook.

[File: New: blank workbook] and in the new sheet, Write a SRIMfit formula in a cell like "= sr ". Then a function list will appear.

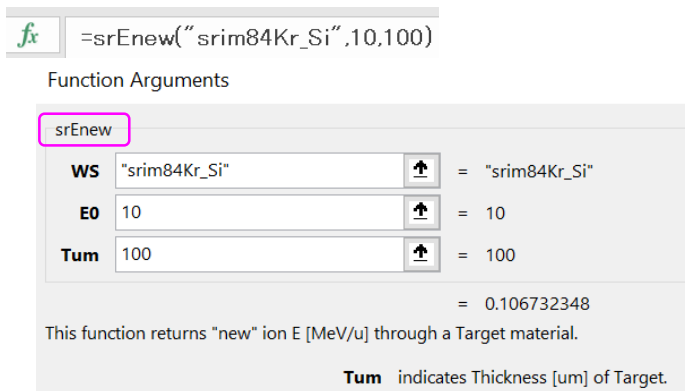

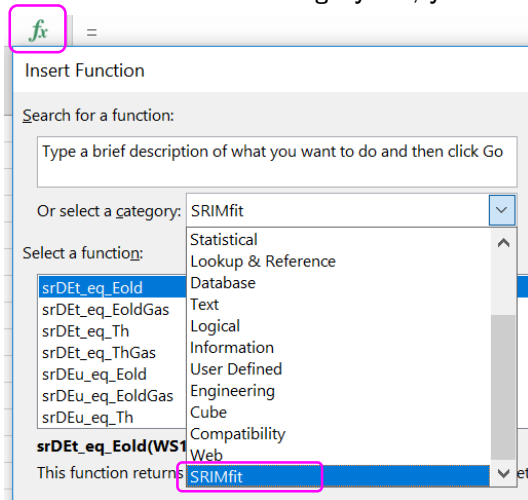

Then the System AddIn Folder path will be returned in the cell.

(4-3) Check Function Help Message

Move to a blank cell, and Click 「Insert function (fx) 」.

At the bottom of the category list, you can find "SRIMfit".

Choose "srEnew", then appears a Function Arguments box.

If you could confirmed up to here, it suggests that SRIMfit macro script was installed properly.

● Check using a macro sheet

_Scripts

1_Install_auto.bat

2_Install_help.xlsm

3_Install_check.xlsm

← Open this macro included Excel book.

← Click “Enable Content” and continue.;

Here, if a message box telling “Link error” appears, please refer to (5–3).

(4–4) Check Macro Information

See “eg11Macro Info” sheet in this Excel book.

	A	B	C	D	E	F	G	H	I	J
1										
2		SRIMfit_check					AddIn macro version: function call			
3										
4		usage for Macro-Info functions							Green	are returned
5										
6		srMcVer()					SRIMfit version number			
7										
8		srMcPath()					SRIMfit installed directory path			
9										
10		srMcWBName()					Current MySRIMwb file name			
11										
12		srMcWBdir()					Current MySRIMwb directory path			
13										
14		srMcWScount()					Number of sheets in MySRIMwb			
15										
16										
17		srMcWSlist()					WSname list in MySRIMwb			
18										
19		srInfoWScorded()					and its corded info.			
20		List of installed WSnames								
21		Sheet No.	Sheet Name	cf)	Corded info				cf) As srMcWSlist() returns here, = TRANSPOSE(srMcV	
22		1	VerLog							
23		2	srIm1H_Si		Ayoshida.RIKEN 2017.06					After you determin the are;
24		3	srIm1H_Al		Ayoshida.RIKEN 2017.06					CTRL+SHIFT+Enter is neede
25		4	srIm1H_Au		Ayoshida.RIKEN 2017.06					
26		5	srIm1H_C		Ayoshida.RIKEN 2017.06					
27		6	srIm1H_Diamond		Ayoshida.RIKEN 2017.11					
28		7	srIm1H_Air		Ayoshida.RIKEN 2016.07					
			VerLog		eg11Macro Info					eg12MySRwb check

← These are information on “SRIMfit.xlam” and on “MySRIMwb.xlsx” installed in the System AddIn Folder.

If “# NAME?” errors appear here, the installation of “SRIMfit.xlam” is not completed.

← This list shows the contents of “MySRIMwb.xlsx”.

If “# NAME?” errors appear here, the “SRIMfit.xlam” could not find “MySRIMwb.xlsx” in the SystemAddIn Folder.

(4-5) Check sheets in MySRIMwb

See “eg12MySRIMwb check” sheet in this Excel book.

SRIMfit_check AddIn macro version; function call is =srFuncName() w/o file path

MySRIMwb.xlsx contents check Blue are inputs, Green are return values.

WSname = **srim40Ar_Air** ← write a WSname in the MySRIMwb.xlsx ← Fill in a WSname listed in previous page.

Green values shown in cells are returned value from SRIMfit functions.

Uninstallation procedure

(5) Uninstallation procedure

(5-1) Release AddIn

Run Excel and open a New blank workbook.
Click [Developer: Excel Add-ins]

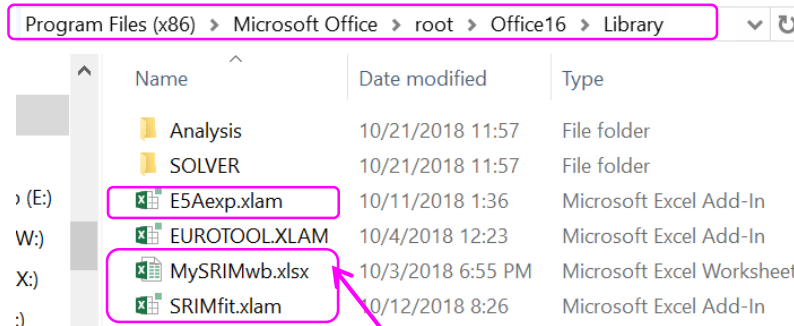

Make check mark OFF for “SRIMfit”, and “E5Aexp”.

This is a temporary uninstallation for the SRIMfit module.

(5-2) Delete files

After that, if you need complete uninstallation, please delete some SRIMfit related files in the System AddIn folder.

The folder can be found using procedure (3b-1).

Delete these files for with admin privilege.

(6-1) Recover “Link Error” for AddIn files

After the registration of AddIn and you “first open” an Excel book containing function calls for SRIMfit, the following “Link Error” messages may appear in sometime. In this case, please recover the link for AddIn files.

Microsoft Excel

✕

This workbook contains links to one or more external sources that could be unsafe.

If you trust the links, update them to get the latest data. Otherwise, you can keep working with the data you have.

Update

Don't Update

Help

← Click “Update” links

We can't update some of the links in your workbook right now.

You can continue without updating their values, or edit the links you think are wrong.

Continue

Edit Links...

← Click “Edit Links”

Source	Type	Update	Status
SRIMfit.xlam	Worksheet	A	Warning! Values referring to other workbooks

① Is the Link Status “Warning”, right ?

② First, Click “Check Status” and if the status changes to “OK”, like ③, Link Recovery is finished. Click ⑥

But if it is not OK,

④ Click “Change Source” and

⑤ << Microsoft Office >> root >> Office16 >> Library

⑤ Specify the “SRIMfit.xlam” file installed in the System AddIn folder.

The folder can be found using procedure (3b-1).

(6-2) Recover “Link Error (#NAME?)” in each cell

If you made miss treatment for AddIn link error in (6-1), you may see “#NAME?” error in each cell of your worksheet as below.

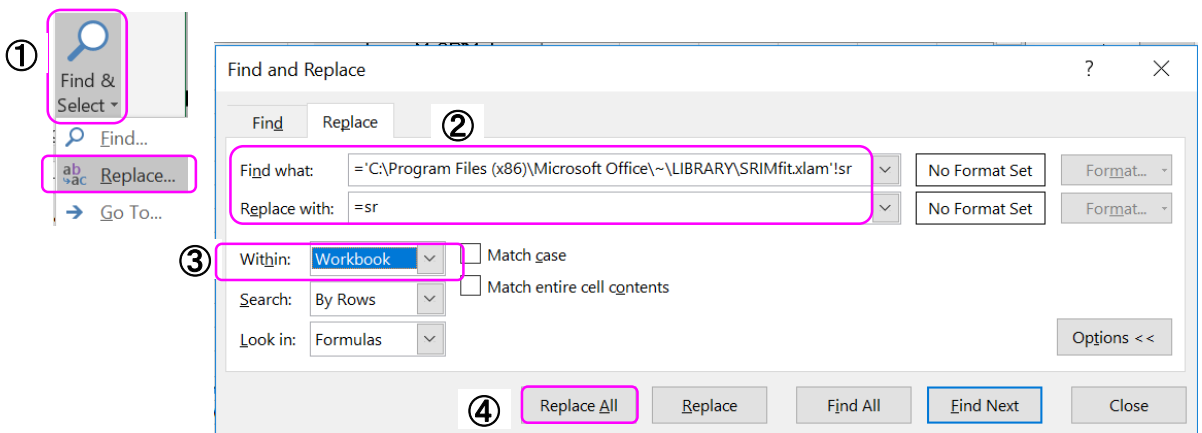

If this happens, it is better NOT to save this excel book, but “Don’t save” and quit this book. And again try to recover link error for AddIn files according to (6-1). But unfortunately you have saved the book file, please follow the instruction below.

When the AddIn link error happens, Excel system changes function call formula in each cell to a “full path format”, automatically. It is nervous problem.

To recover the “full path format”, it is better to remember the following.

① From Home menu [Find & Select: Replace]

② Find what : 'c:¥Program Files~ ~ ~¥SRIMfit.xlam' ! ← until “!” mark
Replace with : ← blank

③ Within : Workbook
And ④ Replace All

Install for Old Excel

The following instructions are examples using Excel2003 on Win10.

● Note for old Excel (97~2003)

- File Type of AddIn Macro is NOT .xlam but is **.xla**.
- File Type of Book file is NOT .xlsx but is **.xls**.

(1) Setup for Excel

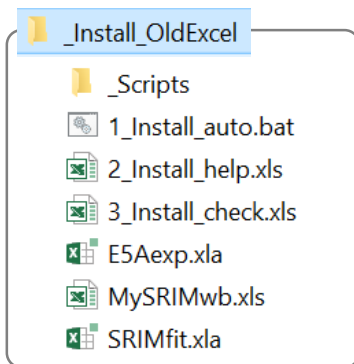

(1-1) Show [Developer] Tab

Excel2003 does not have the tab, but you can use [Tool: Macro: Visual Basic Editor]

(1-2) Give permission for Macro Security

Please use [Tool: Macro: Security]

(2) Setup “_Install” folder

Please use **_Install_OldExcel** folder.

SRIMfit.xla **E5Aexp.xla** **MySRIMwb.xls**
are the files to be installed.

For confirmation, use utility files of **.xls**
If Link Error occurs, please check the link ;
not to SRIMfit.xlam but to **SRIMfit.xla**

(3a) Install using automatic script

(3a-1) Run a batch file

- Run 1_Install_auto.bat with admin privilege.
- For WinXP, login as admin user and run the .vbs script included in _Script folder.

(others) are same as mentioned above.

Install for MacOS

● Note for MacOS + Excel for Mac

- I have only checked the current SRIMfit (ver.3.1.3) is working under the following environment;
macOS Mojave (ver.10.14) + Excel for Mac 2016 (ver.16.16.2)
- Function help message has NOT worked yet..

(1) Setup for Excel

(1-1) Show [Developer] Tab

(1-2) Give permission for Macro Security

Please consult your Excel manual.

(2) Setup “_Install” folder

You can use same `_Install` folder for WinOS.

(3a) Install using automatic script

This does NOT work, because the scripts are for WinOS only.
Then, please do the following manual installation.

(3b) Install by manual procedures

(3b-1) Check a directory path to install

← Open this macro included Excel book.

- Although this excel book shows you a certain Application.LibraryPath,
but the path is not exactly same as your Real System AddIns Folder, in sometime.
Please find it by yourself as looking for a similar directory path name.

(others) are same as mentioned above.
