The 1st RIBF Nuclear Physics Seminar

Neutron number dependence of strength functions and compressibility

Dr. Jun Terasaki

Heavy Ion Nuclear Physics Lab.
RIKEN

Abstract

I recently performed calculations of strength functions of the isoscalar and isovector 0^+ , 1^- , and 2^+ modes of even Ca, Ni, and Sn isotopes from the proton drip line to the neutron drip line using the quasiparticle random-phase approximation with the Skyrme and delta pairing interactions. A common feature in any modes is an enhancement of low-energy strength near the neutron drip line, and the most significant one is the isoscalar 1^- mode. I show compression modulus of the symmetric nuclear matter as an example of application of the strength functions.

The seminar will be given in English.
